### VERIFICATION & SECURITY

In order to ensure that our panelists are who they say they are, we put them through an extensive validation process including the provision of a physical mailing address in order to receive survey compensation.

Digital fingerprinting reduces redundancy and confirms the geographic location of our panelists. Digital fingerprinting incorporates browser version, IP address and MAC address, creating a digital identity that goes far beyond enabling cookies.

### PANELIST PROFILE VALIDATION

Panelist profiles are updated on a quarterly basis to ensure that the information captured is the most up to date. This allows us to continually enhance the granular level at which we can profile our respondents.

Our dedicated panel team routinely monitors panelist profiles and evaluates panelist information to ensure that the high quality standards of our panel are continuously being met.

### DATA QUALITY

Quality is of the utmost importance to us. We employ speed traps, straight-line tests and red herrings on every study we program and host to ensure thorough and comprehensive responses from our panelists.
